

To whom it may concern:

The Iris M kit is a data processing machine which optically records vibration for analysis. This kit has a central processing unit in the form of a Microsoft Surface Book comprised of a display and keyboard. This processing unit is connected to a CCD TV Camera for recording optical data. The data is encoded in a proprietary format and analyzed by a proprietary program on the central processing unit. It is categorized under the Harmonized Tariff Schedule code of 8471.
